Re:  Intervals Between COVID-19 Vaccines and Other Vaccines No Longer Required in Saskatchewan

Dear Colleagues:

Administration of a COVID-19 vaccine and other vaccines previously required specific intervals. Effectively immediately, all Health Canada approved COVID-19 vaccines can be given concomitantly with other vaccines; no intervals are required before or after COVID-19 vaccine administration.

The Ministry of Health has closely monitored simultaneous administration of COVID-19 and other vaccines (at separate injection sites) as implemented by the United States and British Columbia over the past few months. No additional safety risks or adverse events following immunization have been identified by simultaneous administration of these vaccines.

Intervals Between COVID-19 Vaccines and Other Vaccines no Longer Required in Saskatchewan

September 2, 2021

This directive ensures that individuals have the opportunity to be immunized against COVID-19 when they are eligible to receive other vaccines such as influenza and school-aged vaccines.

Sincerely,

Dr. Saqib Shahab
Chief Medical Health Officer
