Dear Colleagues:

Re: Clarification of COVID-19 Vaccine Booster Doses for Immunocompromised Individuals.

The Government of Saskatchewan is providing clarification on booster doses for immunocompromised individuals.

A letter was distributed on January 21, 2022 advising a booster dose for immunocompromised individuals. The table below clarifies the booster after the initial three dose primary series should be administered three months or longer after their most recent dose.

<table>
<thead>
<tr>
<th>Population</th>
<th>Interval from Primary Series to First Booster Dose</th>
<th>Interval Between Booster and Subsequent Dose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Moderately to Severely Immunocompromised (age 12 and older)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Those that have already qualified (met criteria as defined by NACI&lt;sup&gt;1&lt;/sup&gt;) for three doses of a COVID-19 vaccine as a primary series are eligible for a booster dose three months or longer following their most recent dose</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• New individuals that meet the criteria as defined by NACI should receive a three dose primary series (minimum 28 days between each dose) and a booster dose three months or longer following their most recent dose.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Moderna Dosing for Above Populations
When Moderna vaccine is provided as a booster dose in either of the above populations, regardless of the type of vaccine used for previous doses, a full 100 mcg (0.5 ml) dose is to be administered.

Sincerely,

Dr. Saqib Shahab
Chief Medical Health Officer
